

# Viral RNA Extraction Kit

## Quick Start Guide

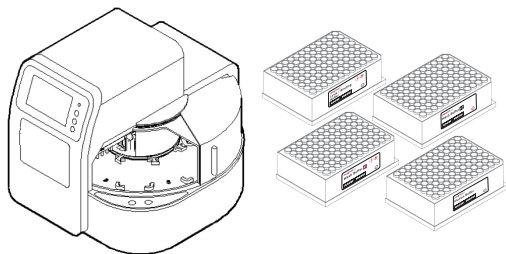

**1** Remove protective foil from Lysis / Binding plate.

**2** Add 300µl of sample to Lysis plate.

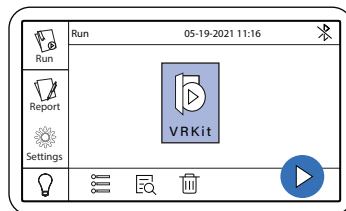

**3** Peel remaining three plates and load all plates onto their respective positions on the extraction machine.

 Place tip combs on Lysis / Binding plate or in dedicated tip plate, according to machine's specifications.

**4** Select the VR0096 program.

**5** Purified nucleic acids collected from elution plate.
